

# O.D.A. Prompting Framework

## Overview

- Give a brief explanation of the task or problem to establish context.

I would like to get your help with writing a VBA macro for Excel. The goal of the macro is to export or save each selected sheet to a CSV file. Each sheet contains an Excel Table, so the macro will need to run the following steps to work around Excel limitations when selecting multiple sheets with Tables.

## Details

- Give as much detail as possible about how the task should be solved.
- Use step-by-step instructions to prevent assumptions or misunderstandings.

1. The macro should prompt the user on where to save the CSV files.
2. Loop through the selected sheets.
3. Select an individual sheet.
4. Copy that sheet to a new workbook.
5. Save the file as a CSV file.

## Ask Questions

- Do you have any questions about this task?
- Are there any potential problems that I might encounter with this task?

Do you have any questions on this macro?
